

## simple pharmacy system:

- **suppliers**
- **medication table or stock** - you can register medicines from suppliers...
- **sales control** - The system may have a sales control module that allows the pharmacist to record sales
- **revenue control** - can have a revenue control module that allows the pharmacist to record medical prescriptions, verify their validity, and manage the stock of controlled medications. In the end, use your knowledge.
- **customer control** - It can have a customer control module that allows the pharmacist to register new customers and manage their contact information.
- **Reports and statistics** - It can have a reports and statistics module that allows the pharmacist to generate sales reports, inventory reports, and other relevant data
